

# Electrical Measurements

Grid Measurement & Analysis

*Electrical measurements* are now a wide field that extends into every scientific and technological discipline. Their importance has recently increased they and are among the driving forces behind the progress in science and technology.

Our company provides reliable services in terms of measuring electrical quantities, while using state-of-the-art technology. Our experts choose the most appropriate measurement method based on customer requests.

**Gridman** offers measurement of:

- **Basic electrical quantities (current, voltage, power and power factor)**
- **Quality of electrical energy (upper harmonics, voltage drops, power flicker, asymmetry)**
- **Grounding and lightning systems (touch and step voltages, grounding system impedance)**
